

AISPilot

SAFETY YOU CAN AFFORD

New **AISPilot** puts greater safety right into the palm of your hand.

AISPilot makes enhanced safety so portable, convenient and affordable, it is now within the reach of every pilot.

AISPilot is light, long-lasting, wireless and works on every pilot plug. It puts AIS data on your screen at the flick of a switch – every time, every ship.

Why **AISPilot**?

- Small and lightweight, even compared to an AIS cable - and really convenient
- Can be used with **HarbourPilot** or independently
- No hassle connection – plug into the pilot port and data flows to your display
- Automatically fixes bad wiring and wrong baud rates
- Wireless link to your laptop – move easily around the bridge and onto bridge wings
- No more problems with badly positioned or incorrectly wired pilot plugs
- Long battery life – enough for several consecutive pilotages
- Batteries can be charged while in use
- Any AA batteries can be used in an emergency
- Works with any AIS capable software

Why AIS?

AIS is a valuable safety tool, but it is often ignored in pilotage waters. Unless integrated onto the ship's radar/ECDIS displays, it is simply too hard to access.

But not anymore. It can now be wirelessly transmitted to the pilot's own display - no more extracting data from a tiny MKD display or fiddling around with cables.

Overlaid on a chart, using suitable PPU software such as Qastor, **AISPilot** will give you an instant picture of what ships in your vicinity are doing, including:

- Scaled target vessels
- Line of sight CPAs
- CPAs relative to planned track
- Other vessel details
- Own vessel information

Specifications:

Components:	AISPilot unit, recharger, carry pouch.
Weight:	400g (plus recharger and pouch).
Size:	14cm long, 8cm wide and 4cm high. Pilot plug cord 64cm long.
Technology:	Wireless LAN.
Battery life:	12hrs. Four standard rechargeable AA batteries with built-in recharger.
Optional Extra:	Battery pack for charging while in operation.
Warranty:	12 months warranty, excluding batteries.
